Very Good Book on Ferrocement

By Patrick A Reid

I like this book. The only thing I think this book lacks is some literature on how to design ferrocement beams with relations to the span of the beams and depth of the beams. For example, can a ferrocement I-Beam, C-section or Box Beam span 30 feet unsupported? What design procedure should i follow to design a ferrocement beam to span 20, 30 or 40 feet?

Additionally this book does not tell me what is the safe unsupported span of ferrocement slabs in relations to their thickness, reinforcement etc. Can I build a ferrocement roof slab or floor slab that is say 10 feet square unsupported?

As a civil engineer or construction engineer I should be able to readily find that information. This good book does not tell me. Nor does the literature that is provided by American Concrete Institute.

Become a Ferrocement Engineer.

By Scott Knudsen

You need to be an engineer to understand most of this book, but the book is a must for anyone planning to build with ferrocement.
