Excellent source for problem solvers

By Dimitar

Mathematical Reflections: the first two years, is an excellent book for anyone who has a passion for mathematics and has some background in problem solving.

The first two sections provide a compilation of well-selected elegant problems from all around the world,

with thoroughly explained solutions. This large spectrum of problems gives the reader a deep satisfaction upon working through them and learning different techniques. In the third section the author assembled a collection of over thirty articles on fairly advanced topics that will surely benefit any reader interested in advanced mathematics.

With the seemingly endless amount of problems, the reader is guaranteed to find pleasure in this book, provided that he dedicates reasonable amount of time for it.

Even more problems!

By Eudaimonia Dad

This is the second book in the Mathematical Reflections series. As I noted in my review for the first book of the series, these problems are contributed by math enthusiasts from all over the world to the online journal, Mathematical Reflections.

The book has a Problems, Solutions, and Articles section and the levels are Junior, Senior, Undergraduate and Olympiad.

If you are interested in exploring a wide array of mathematical topics with individuals who are passionate and knowledgeable, this is the book for you. There are discoveries to be made in the fields of Geometry and Algebra, of course, but also in other areas such as Linear Algebra, Calculus, and Graph Theory.
