Tilapia Farming – Practical Manual

A Compilation of Tilapia Farming Technical Information

Tilapia the super-fish. Tilapia fish is commercially cultured fish that is easy to grow, fast to reproduce, adaptable to farming settings and conditions, while at the same time is resilient to disease and highly acceptable by American consumers.

Tilapia fish have a mild, white consistent flesh denser than cutfish, but less dense than salmon; a mild flavor that may accompany any other food dish. This appeals to farmers and consumers. Tilapia has become the 5th most consumed fish in United States in the last decade, behind only to Tuna fish.

The many desirable traits makes Tilapia fish an ideal aquaculture specie. Most commercialized species include the Mozambique (*Oreochromis mossambicus* or *Tilapia mossambica*), blue Tilapia (*O. aureus* or *Tilapia aurea*), Nile Tilapia (*O. niloticus* or *Tilapia nilotica*), Zanzibar or Wami Tilapia (*O. hornorum* or *Tilapia urolepis*), and the lesser known redbelly Tilapia (*O. zilli* or *Tilapia zilli*) and *O. Rendelli*. These species known to current markets today contribute about 4% of the total Tilapia aquaculture production worldwide.

Species Origen and world distribution

Tilapias are native to Africa and the Middle East. Once foreign to the United States, populations of Tilapia are now established in Arizona, California, Hawaii, Florida, Wyoming, Nevada, New Jersey, North Carolina, and Texas. Tilapia was introduced to North America, South America and the Carribean islands in the early 1950's

Its generic term Tilapia is used to designate a group of commercially farmed fish belonging to the family Cichlidae. The African native Bechuana word "thiape" gave origin to it present name, the word meaning fish. Bechuana a former name for a member of the Bantu people of Botswana, Africa. Tilapias are classified in the large order of fish genera inhabiting fresh and brackish waters of Africa, the Middle East, coastal India, Central and South America and most recently USA where is considered an invasive specie requiring State certification for commercial possession.

Mouth-Brooding Tilapia Genera

Tilapia of the genera *Sarotherodon* and *Oreochromis* parents will incubate and protect the young in their mouths (mouth brooding); a genera survival trait and distinguishing characteristic of caring parents; such behavior enhancing the offspring survival allowing great proliferation. Specific reproduction roles are seen in *Oreochromis*, these species distinguished by maternal mouth-brooding while parental fish prepare reproduction grounds keeping any intruders from the maternity ward grounds.

After inception care of the young is performed primarily by the female fish carrying the young fish – fry - in its mouth until the tiny creatures are self sufficient and can protect themselves from larger bigger, praying fish. A great survival and adaption trait that increases survival rates substantially.

Critical Review

By Fish Prof

The contents of this book are simply a collection of generic information that has not been well edited and the book certainly does not live up to its title. To add insult to injury, the print quality is very poor and most of the pages were stuck together from improperly dried ink. Even the ink density was very weak (approximately 50%) The figures and tables in particular were of very poor quality. The publisher or the authors simply took an older word document, added copy/pasted poorly prepared tables, figures and illustrations, and printed it without even selecting print fonts that were not appropriate for printing a pamphlet.

In short, this is an overpriced, poorly prepared booklet of a quality normally found in pirated copies ripped in developing countries and sold for one or two dollars.

This would be an acceptable and useful booklet if the authors or publisher took a little pride in what they are doing.

Grossly overpriced

By Adrian Melero

I was expecting much more. It ends up being only 1/8 inch thick workbook type with just the basics. Only about 50 pages and the 8.5 x 11 pages ink was a little light as if the whole thing was produced from a photocopier and bound. A more appropriate price would be \$12.
